

# MOBEYE INTERNET PORTAL

Mobeye Call-Key stand-alone or web based

The Mobeye Call-Key opens a door because an authorised telephone number calls the Call-Key unit. The Mobeye Call-Key can work in two ways:

## How it works

- ✓ Stand-alone: the telephone numbers are programmed into the unit via SMS-commands. Telephone numbers are authorised for 24/7, i.e. they may open the door at any time.
- ✓ Connected to the Mobeye Internet Portal: management, programming and displaying of the history can be done in the secured internet environment. Telephone numbers can be authorised for 24/7, temporary (from-to date) and/or specific time frames (days/time blocks).

## Stand-alone

The Mobeye Call-Key with stand-alone functionality needs a SIM card which can Phone and send/receive SMS message. There is no data traffic (GPRS). The user can insert a SIM card in the GSM dialler, either prepaid or a subscription.

## Connected to the Mobeye Internet Portal

The Mobeye Internet Portal offers additional functions to the administrator. Via Internet the programming of the authorizations is and made and the history is displayed. In addition, it is possible to authorize numbers for specific time periods and / or time windows.

The communication between the Mobeye Call Key and Mobeye Internet portal is largely through GPRS traffic. Mobeye delivers the Call-Key SIM card with the correct settings, so the installation is ready in a few minutes.

- The subscription fee for the combination of the SIM card and the Mobeye Internet Portal costs a low amount per month (the costs are charged on yearly basis). No other charges are involved\*  
\* based on 'fair use' and w/o additional alarm SMS text message from the portal
- There are no charges when somebody calls the unit to open the door (the call is not replied, the unit recognizes the number and suspends the call).
- The GPRS SIM card is supplied with the Mobeye Call-Key. If it is not included, please contact Mobeye (info@mobeye.eu).
- The user registers the SIM card in the Mobeye Internet Portal ([www.mymobeye.eu](http://www.mymobeye.eu)). Immediately after signing, the card is activated and the user receives the invoice for the subscription.
