

MOBEYE APPLICATION SHEET

Applications for measuring, control and alerts

MOBEYE ARGOS CONTAINER ALARM

Sea containers are a good place to store materials. But often they are located at parking places or remote terrains, which makes them vulnerable to burglary. The Mobeye Argos Shipping Container Alarm was designed to protect your belongings. It is a self-contained alarm system running on a set of batteries, with a built-in GSM module. To ensure a reliable GSM network reach, the antenna is placed outside the metal part. In the event of an intrusion the Container Alarm will call you and send an SMS text message. The Mobeye Argos has an listen-in option so you can hear the sounds in and around the container.

Security is made easy!

Mobeye Argos-SMA

Self-contained alarm system with GSM on board, prepared as Argos Container Alarm (SMA connector).

Mobeye AC-AN-MB30

Vandal proof and weather resistant external 'mushroom' antenna with 30cm cable.

How it works

- Find or make a small hole in the wall of the shipping container, preferably close to the doors.
- Bring the antenna from the outside to the inside and fix the antenna with the included screw-nut.
- Insert a SIM card and the included batteries in the Argos and program at least one telephone number as alarm receiving number. If desired the Mobeye Argos can send test messages with a self-chosen interval.
- As SIM card we advise the Mobeye SIM card so you can use the Mobeye Internet Portal as management tool. Alternatively, you use your own (normal) SIM card.
- Battery life time is over a year. Once the batteries need to be replaced, you will receive a message.
- Activate the alarm system by code or time schedule, feel safe and protect your belongings!
