

MOBEYE APPLICATION SHEET

Applications in security and alarming

MOBEYE Mobile GSM Smoke Detector

Just follow the (risk of) fire

For situations where fire protection is required, but no installation work is preferred, the Mobeye GSM smoke detector helps you out. It is easy to install and completely battery operated.

Security is made easy!

Mobeye GSM smoke alarm

CM2400 Combination of Mobeye battery operated GSM alarm unit and EI Electronics EI605TYC (high standard smoke detector (10 years lithium battery), in elegant integrated construction.

How it works

- By placing your own SIM card and the included batteries and programming the alarm telephone numbers, the CM2400 is operational.
- The CM2400 is installed in just few steps, preferably fixed at the ceiling.
- Once the smoke detector detects fire, it will sound loudly and send alarm messages (SMS and/or call) to the pre-set numbers.
- Once the batteries need replacement an SMS is sent. The system is able to send test messages ('keep alive').
- Since the installation steps are easy and quick, the CM2400 can be used for temporarily fire protection, during events or construction work.
- In dusty environments, the heat detector CM2400H is recommended.
