Applications in security and alarming

MOBEYE Frost alarm - kit

Prevent frost damage, keep the cold outside

The holiday home or chalet is a nice place, although it is not always occupied. During the winter the thermostat ensures that the inside temperature does not drop below zero, in order to prevent frost damage. If this happens, pipes can burst and thus provide considerable damage. Mobeye helps you and alerts you when it is too cold or power failure occurs.

Security made easy!

Mobeye frost alarm

Mobeye ThermoGuard

GSM temperature alarm, lower and/or upper temperature limit. Alerts to user-defined telephone numbers.

12VDC 500mA adapter by connecting the ThermoGuard with the mains via the adapter, the presence of power is monitored.

How it works

- Provide a SIM card (prepaid or, preferably, an affordable subscription).
- Insert the SIM card and the batteries into the Mobeye ThermoGuard.
- Program the desired temperature limits and at least one alarm telephone number, by sending simple and clear SMS commands to the unit.
- From now on you will receive an SMS text message and/or call in case of power failure and when the temperature gets out of range.
- The curious the Mobeye ThermoGuard can request the actual ambient temperature remotely; a good start to make holiday planning!
