

MOBEYE APPLICATION SHEET

Applications for measuring, control and alerts

MOBEYE Frost alarm

Night frost alarm system

No more sleepless nights

In springtime fruit growers need to prevent orchards and vineyards from serious frost damage. By switching on irrigations systems and wind machines a water layer protects the blossom against frost.

The Mobeye ThermoGuard provides continuous monitoring of temperatures and warns the farmer at the moment the temperature gets too low. This battery-powered GSM alarm system calls and / or texts to self-defined telephone numbers, once the temperature gets below the critical limit.

For your comfort and security!

Mobeye Frost alarm

Mobeye CM2200

Battery-operated temperature alarm with external temperature sensor integrated GSM module.

Mobeye AC-CMHX

Outdoor enclosure, IP67.

How it works

- Bring a 2G (normal) SIM card or opt for the Mobeye SIM card in combination with the management tool Mobeye Internet Portal.
- Insert the SIM card and the included batteries
- Program in the lower temperature limit and at least one telephone number as alarm receiving number.
- Battery life time will be longer than the yearly frost period, even with low temperatures. Once the batteries need to be replaced, you will receive a message.
- Upon an alarm situation you'll receive a phone call and SMS text messages (with temperature)
